(54) Title: A MARINE FUEL SUPPLY SYSTEM AND A MARINE CRAFT INCLUDING SAME

(57) Abstract: A marine fuel supply system is disclosed in which a salt water sensor 13 is positioned between a fuel reservoir 1 and a pump 3 used to pump fuel from the reservoir 1 to an internal combustion engine. The water sensor 13 is located near to the bottom of a closed vessel forming part of a water separator 2 so as to sense when salt water separated from the fuel has reached a pre-determined level. A signal is then sent to indicator means in the form of an electric lamp 21 and buzzer 22 to warn an operator of the marine craft of the need to drain off the collected salt water.
